COVID-19 Statistics  
As at 11 May 2020  
A Management Information publication for Scotland  

Publication date: 13 May 2020  

About this release  
This is the second release by Public Health Scotland on COVID-19 data across NHSScotland. New analysis included this week: COVID-19 Hospital Admissions and Scottish Ambulance Service data.  

Main Points  
As at 11 May 2020:  
• There were 13,627 confirmed COVID-19 cases, equating to 249.4 confirmed cases per 100,000 population.  
• Of the 13,627 confirmed COVID-19 cases, 8,249 (approx. 61%) were women, 5,345 (approx. 39%) were men, and there were no data on the sex of 33 cases.  
• The highest rate of confirmed cases occurred in those aged 85 and above.  

Confirmed COVID-19 cases per 100,000 population by age group and sex, as at 11 May 2020  

• As at 10 May 2020, 495 confirmed COVID-19 cases have been treated in an Intensive Care Unit.
**Background**

On 1 March 2020, the first person in Scotland was tested positive for COVID-19. On the 17 March NHS Scotland was placed in an emergency footing by the Cabinet Secretary. Schools have been closed since 20 March and the country has been in lockdown since 23 March.

Since the start of the outbreak, Public Health Scotland (PHS) has been working closely with the Scottish Government and health and care colleagues to support the surveillance and monitoring of COVID-19 amongst the population.

There is a large amount of data being regularly published regarding COVID-19 (for example, Coronavirus in Scotland – Scottish Government and Deaths involving coronavirus in Scotland – National Records of Scotland). This report complements the range of existing data currently available.

The COVID-19 pandemic is a rapidly evolving situation.
